### ***Allowable Subject Matter***

Claims 1-12 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the prior art taught many examples of wall mounted bottle holder apparatuses, but failed to specifically teach a wall mounted bottle holder apparatus comprising:

a base, for connecting the apparatus to a flat solid surface;

a tongue, that has a root and a free far end, and the tongue's root is connected to the base, comprising:

a bottle brace, that starts from the tongue's root, and  
a neck holder, for holding the bottle's neck securely in a locking point, with  
a first edge connecting to the bottle brace at a base angle of about 90 to  
120 degree angle, and a second edge, which is the tongue's free far end,  
remains unattached; and

a fastening device, for pulling and holding the bottle's body toward the bottle  
brace and locking the bottle in the locking point; and

wherein the neck holder has an open slot at the second edge, extending toward  
the bottle brace at a width slightly larger than the width of the bottle's neck until the  
locking point, located at a distance of about half of the bottle's body width from the bottle  
brace, wherein the open slot width narrows down to less than the width of the bottle's  
neck, creating two landing points, and the open slot extends toward the bottle brace an  
additional distance of about half the width of the bottle's neck; and

wherein the locking point is created by adjusting the base angle and the distance  
between the landing points such that when the bottle's neck is inserted upside down into  
the open slot and reaches the landing points, and the bottle's body is pulled toward the  
bottle brace by the fastening device, the following conditions exist:

- the bottle's body touches the two landing points and turns on a pivot line that  
connects the two landing points,
- the bottle's head touches the neck holder, and

- the bottle's body has a gap of about 0.5 to 20 millimeters from the bottle brace;  
and

a mounting device that connects the base to the flat solid surface such that the bottle's head, at the locking point, is oriented forward and downward 1 to 60 degrees relative to a vertical line, and tilts relative to the vertical line from 60 degrees to the left to 60 degrees to the right.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Barnes '403, Fite, Jr. '083, Hogan '353, De Sipio et al. '024, Jones '260, Buras, Jr. '755, Daves '293, Kline '868, Phelps '225, Williamson et al '445, Mok '360, Shelley '260, Chaffin et al '246 and Keicher '490 teach various bottle holding apparatuses.
